HOW TO REVIEW & APPROVE A PLAYER STRATEGY — Home Page

1	Select a Player On the Home screen, click a player card. The portal loads their practice round data and begins analysis automatically.
2	Strategy Generates In a few seconds, an 18-hole strategy appears — tee shot club, target line, approach target, and putting focus for every hole.
3	Review Each Hole Card Cards are colour-coded by confidence. High confidence holes are auto-approved. For Medium and Low confidence holes, read the rationale, edit if needed, then click Approve.
4	Bulk-Approve High Confidence Use 'Approve All High Confidence' to instantly approve every hole the system is certain about — saves time when data is strong.
5	Sign Off & Send Once all flagged holes are approved, 'Sign Off & Send to Player' becomes active. Click to confirm — the player receives their strategy.

CONFIDENCE KEY

HIGH Auto-approved.
Consistent data across 3+ rounds.

MEDIUM Needs your review.
Some variability in performance.

LOW Limited data. Verify and adjust before approving.

ROUND DEFENSE

Go to **Round Defense** in the top navigation bar.
1–2. Select a player from the sidebar on the left.

Tap the **microphone icon** on any hole card to record your audio commentary after the round.
3.

Use **Press Conference** to record an overall post-round debrief.
4–5. Recordings are stored for the session — perfect for player review.

TIPS

→ Use **Filter: Pending** to jump straight to holes still needing your approval.

The **Player 360 panel** on the right of Home shows ClippD analytics alongside each hole strategy.

→ **Edit any hole** before approving — edits are flagged so the player knows what was personalised.
